

## Company Description

Aeroficial Intelligence is a forward-thinking Aviation IT company, based in Graz, Austria, and established in 2018. We have developed the Cockpit Suite, a cutting-edge software that delivers innovative technology for airports and air traffic control. By offering full data visibility, we empower airports and airspace operators to optimize performance and efficiency.

At Aeroficial Intelligence, we believe that innovation is a team effort and success occurs across cultures, diversity and through motivation. We are convinced that we can only provide our customers with the best services and technology, if we provide a unique working environment for all our team members as well as a fun working atmosphere.

Join our passionate team and contribute to the next generation of operational intelligence in the aviation industry!

## Role Overview

We are seeking an experienced and motivated Product Owner to join our dynamic team. As a Product Owner, you will oversee the end-to-end process from creating specifications to project completion. You will work closely with developers, stakeholders, and customers to translate business requirements into actionable deliverables while maintaining alignment with the company's vision and goals.

## Your Tasks

- Technical responsibility for managing the backlog, sprint planning, writing user stories and coaching the team in the context of the Scrum framework
- Collaborate with clients and the sales team to gather requirements and translate them into detailed specifications and user stories
- Monitor project progress, ensuring timely delivery of high-quality solutions
- Act as point of contact for the development team, sales team and customers
- Continuously assess product performance, collect feedback, and implement improvements
- Provide clear and concise updates to stakeholders on project status, risks, and outcomes
- Stay informed about industry trends, technologies, and competitor offerings to maintain a competitive edge

## Your Profile

- Successfully completed education at Matura level (HTL) or higher (University, FH), preferably in the IT field or in project management
- Proven experience as a Product Owner or Project Manager, preferably in the aviation industry, but not a must
- Preferably understanding of the Scrum framework and agile methodologies.
- Preferably a technical knowledge in software development
- Excellent communication, leadership, and organizational skills
- Ability to manage multiple priorities and meet deadlines in a fast-paced environment

- Proficiency in using product management tools (e.g., Jira, Confluence)
- Analytical mindset with strong problem-solving abilities
- Familiarity with software development processes and technical concepts

## **Our Offer**

- Work in a dynamic, entrepreneurial environment with a direct impact on company success
- Shape the global aviation industry
- Opportunities for professional growth and development
- Exciting projects with global impact, free from routine tasks
- Dynamic environment with flat hierarchies
- Flexible working arrangements
- Take responsibility and make independent decisions
- Regular team-building activities and social events to celebrate success
- Possibility to apply for a “Dienststrad”

For this position, a collective agreement minimum salary of € 44.450 gross per year applies. Your actual salary will be market-based, considering your professional experience and qualifications.
